

KUTNI ODUŠNICI TANKOVA SA KUGLOM Angle ball air vent heads for tanks

OPIS - MJERNA SKICA

Description - dimension sheme

OPIS

Konstruirani su da spriječe preopterećenje balastnih tankova pri punjenju, kao i uslijed dilatacije volumena tekućine zbog temperature promjene.

Sastoje se od kućišta, izrađenog od vruće pocinčanog čeličnog lima u koje su ugrađene plutajuće kugle.

Izvedeni su u tri osnovna konstrukcijska tipa:

- AVK, DN50 - DN100, sa jednom kuglom;
- AVK, DN125 - DN250, sa jednom kuglom;
- AVKD, DN300, DN350, sa dvije kugle.

Odušnici imaju grubu zaštitnu mrežu, a po narudžbi se izvode sa protupožarnom mrežicom (30 mesh), koja se lako mijenja sa novom. Ukupni pad tlaka na odušniku je prikazan u priloženim dijagramima kao funkcija protoka.

Konstruirani su i testirani za radnu temperaturu do -25°C.

Odušnici su ispitani u prisustvu eksperata registara kompletni i po dijelovima: testiranje PP kugli, protok-pad tlaka i propuštanje kod uranjanja.

Odušnici posjeduju tipska odobrenja izdana od strane slijedećih klasifikacijskih društava: BV, CRS, DNV, RINA.

Prirubnice PN16, DIN. Drugi priključci na zahtjev.

DESCRIPTION

The vents are designed to prevent damages that can be caused by overpressure during filling of ballast tanks and also by dilatation due temperature oscillations.

Ball air vent heads are consisted of hot deep galvanized steel plate body with and floating ball or balls.

The ball vents are manufactured in three basic constructive types:

- AVK, DN50 - DN100, with one ball;
- AVK, DN125 - DN250, with one ball;
- AVKD, DN300, DN350, with 2 balls.

Each ball vent delivered with protective mesh screen and on request with flame screen (30 mesh). The flame screen can be easily removed and if necessary replaced by new one.

Total pressure drop caused by ball vent is shown in enclosed curves.

Designed and certified minimal working temperature is -25° C.

The air ball vents are tested and witnessed during PP balls test, flow with pressure drop test and tightness test.

Type Approval Certificates are issued by world famous classification societies as BV, CRS, DNV, RINA.

Flanges PN16, DIN. Other connections on request.
