

ZUPČASTE PUMPE TIP PZG

Gear pumps type PZG

Zupčaste pumpe tipa PZG su horizontalne izvedbe, sa zupčanicima sa vanjskim ozubljenjem. Pogonska i gonjena osovina su uležištene u klizne ležajeve. Koriste se za pumpanje neagresivnih, samopodmazivih medija, koji ne sadrže krupnije nečistoće. Podesne su za medije koji se moraju grijati (mazut, bitumen,...). Komore za grijanje se nalaze u bočnim poklopcima. Zagrijavanje se može vršiti sa vodenom parom, vrućom vodom ili termičkim uljem.

Pumpe imaju ugrađen ventil sigurnosti podešen na 1.2x veći tlak od radnog.

Pumpe se pogone direktno sa el. motorom ili preko reduktora.

KARAKTERISTIKE:

Radna temperatura.....do 300°C;

Radni tlak.....do 10 bar;

Brtvljenje osovine sa brtvenom pletenicom ili sa osovinskom radijalnom brtvom na bazi PTFE.

MATERIJAL IZRADE:

Tijelo pumpe i poklopci.....nodularni lijev;

Osovine i zupčanicl.....ugljični čelik;

Ležaji.....Al bronca.

Gear pumps type PZG are horizontal pumps with exterior indented gears. The shafts are supported with the bearing bushes and lubricated by transported medium. PZG pumps are intended for pumping non-aggressive, self-lubricating media. PZG pumps are assigned for those media that must be heated, for example: heavy fuel oil, bitumen,... The covers of the pumps are designed with heating chambers. Heating can be performed by steam, hot water or by thermal oil. All pumps are provided with safety valve which is adjusted to value 1.2x higher than working pressure.

Pumps are standardlly driven by el. motors or reducers.

PUMPS CHARA CTERISTICS:

Working temperature.....up to 300°C;

Working pressure.....up to 10 bar;

Sealing of the shaft.....by soft seal or special PTFE lip seals.

CONSTRUCTIVE MATERIALS:

Pump casing and covers.....nodular cast iron;

Gears and shafts.....carbon steel;

Bearing bushes.....Al bronze.
